Users will search for general sales of a book and they will see that information be displayed in a chart of their choice.

Data Analysis:
The visualizations will have the recipe name and cooking time. X being name and Y being cooking time

Execution flow:
User lands on the home screen with the login option → User sees login screen and once logged in is redirected to the recipe list page → User can view more details of a recipe by clicking on it → User sees more details and has a back button to return to the list → User can also select the 'Search' button to look up data about recipes → User selects a difficulty rating and the type of chart they want to see. → User can logout and is redirected to logout screen.
